

Network Rail - Accidents and Incidents

Pennant has produced a number of projects for Network Rail's Corporate Assurance & Accident Investigation Team who may need to cascade Safety Critical information to its staff and contractors after an accident or incident on the rail infrastructure.

Pennant produces high fidelity 3D animations, with narration, to illustrate the circumstances, consequences and lessons to be learned from a number of potentially serious safety-related incidents on the railway.

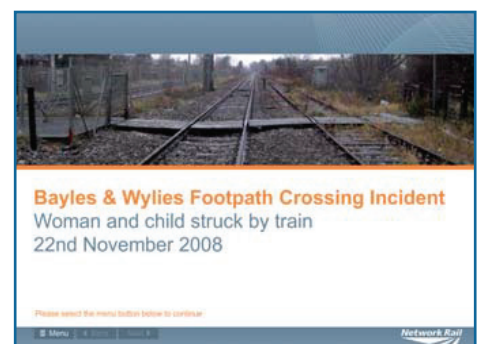

Pennant's industry knowledge, technical competence and experience allows us to communicate directly with a wide range of Network Rail personnel, from track workers, subject specialists to senior managers.

Our fully resourced team of engineers, graphics specialists and programmers mobilises at short notice to attend briefings, assimilate the details, causes, lessons to be learned and all technical and corporate issues required to design and produce the animations.

The CGI animations, delivered via mobile media, provide an immediate, accurate, detailed, objective and approved account of the incidents across the Network Rail community, to the investigating authority and to the wider rail industry.

The animations are suitable for delivery to audiences in a wide range of circumstances, from a laptop in a site hut to a formal classroom setting.

What do our customers say?

Animated reconstructions are a medium we will continue to use in the future, particularly for higher-profile incidents and/or where there are systemic safety issues to convey.
